

CUSTOMER360 AI

From customer data → to the next best decision.

4 members • ~3 minutes • Customer Decision Intelligence

HOOK → PROBLEM → PRODUCT → AI → ACTION → LEARN

MEMBER 1 — HOOK + PROBLEM

“Let’s start with a simple question.

Your business has thousands — maybe millions — of customer interactions every day.

You know what they clicked. You know what they bought. You know when they abandoned a cart.

But here’s the problem...

DO YOU ACTUALLY KNOW WHAT YOU SHOULD DO NEXT?

That’s the problem we’re solving with Customer360 AI — a Customer Decision Intelligence Platform.

We bring fragmented customer signals into one place and turn them into one actionable decision: who needs attention, what should we do, through which channel, and most importantly — WHY?

Because knowing your customer is useful. Knowing your next move is powerful.”

MEMBER 2 — UI/UX

“We had one design rule:

AI should reduce decision complexity — not create more of it.

So instead of making a business user decode machine-learning outputs, we designed a simple flow:

UNDERSTAND → PREDICT → EXPLAIN → DECIDE → PERSONALIZE → ACT

Imagine opening a customer profile and immediately seeing:

82% CHURN RISK • 74 DAYS INACTIVE • 2 ABANDONED CARTS • HIGH-VALUE CUSTOMER

But we don’t stop at showing numbers.

We answer the question every business actually cares about:

‘WHY IS THE AI TELLING ME TO ACT?’

MEMBER 3 — BACKEND + TECH

“Behind that simple interface is a modular decision pipeline.

We start with the signals businesses already have: transactions, clicks, carts and feedback.

We transform those into meaningful features using recency, frequency, monetary value and engagement.

Then our predictive layer estimates churn, purchase propensity, affinity and customer lifetime value.

But here’s the important part:

THE PREDICTION DOESN’T MAKE THE DECISION.

Our Next Best Action engine combines those predictions with business rules and action scoring to rank what should happen next.

Our MVP stack is Python, FastAPI, PostgreSQL, React and ML services.

~50 SEC

MEMBER 4 — THE WOW MOMENT

“And this is where Customer360 AI becomes different.

Prediction alone isn’t enough.

Suppose our system identifies a high-value customer with an 82% churn risk, 74 days inactive, two abandoned carts, and significantly lower engagement.

A normal model might simply say:

‘This customer may churn.’

Cool.

BUT... NOW WHAT?

Customer360 AI goes one step further.

And because we use explainability techniques like SHAP, we can show the behavioral signals behind the recommendation.

FINAL TEAM ENDING

MEMBER 1

Understand the customer.

MEMBER 2

Personalize the experience.

MEMBER 3

Decide the next action.

MEMBER 4

Learn from every response.

ALL FOUR: “Customer360 AI — from customer data to the next best decision.”

RECORDING CUES

1. SHOW THE DASHBOARD — Members 1 & 2
2. HIGHLIGHT “WHY?” / SHAP — Member 2
3. SHOW THE ARCHITECTURE — Member 3
4. REVEAL THE NBA CARD — Member 4, exactly on “BUT... NOW WHAT?”
5. FINAL LINE TOGETHER — pause 2 seconds after it.

IMPORTANT: 82%, 67%, ₹2.4L and similar figures are examples unless they are measured prototype results.

DELIVERY: MAKE THE JUDGES REMEMBER YOU

DON'T READ THE PPT. SELL THE IDEA.

Pause after the hook questions.

Emphasize “NEXT” and “WHY”.

Keep transitions fast.

Let Member 4 own the WOW moment.

Speak naturally and confidently.

THE ONE LINE TO REMEMBER:

“PREDICTION IS NOT THE DECISION.”
